

ABSTRACT

A focusable flashlight comprising of enlarged head and tail cap designed to have substantially the same diameter as a means to facilitate solid and secure gripping and to
5 facilitate rapid, secure stowage of the invention during highly stressful environments, such as combat, law enforcement, night watch, home guard, underwater diving and other situations where the user of a flashlight requires a high level of situational awareness and while in need of operating a flashlight with one hand without distraction. An optional lanyard and holster are designed to work with the flashlight.
